Usage Recommendations - Voon Dot

BATTERY

We recommend charging the Dots before each use to ensure they have the necessary battery life and can accompany you throughout the entire training session without interruptions. Estimated charging time: 1 hour and 30 minutes

SINGLE CONNECTION

Make sure only one mobile device is active to pair with the Dots. The Dots can only connect to one device at a time; if they are already paired with another, they will not be visible and you will not be able to connect to them.

AVOID OTHER BLUETOOTH DEVICES

Disconnect other Bluetooth devices (headphones, speakers, etc.) before connecting to the Dots, as this may affect the connection quality. If you experience disconnections with the Dots while being close, clear the Bluetooth cache or restart your phone to resolve the issue.

DEVICE AT HEIGHT

During the use of the Dots, avoid leaving the paired mobile device on the floor, as the mobile manages communication with the Dots. Always keep the device at a height, such as in your hand, to ensure a stable Bluetooth connection.

ACTIVE BLUETOOTH PERMISSIONS

If the Dots do not appear or are not visible when trying to connect to them in the app, make sure that the app has Bluetooth permissions enabled, or check that the Dots are not already paired with another device.

DATA RECORDING

To ensure proper recording of exercise data, make sure to complete the player field before starting. Avoid performing the exercise as 'guest' to ensure correct assignment of the results.
